1.) From the following 1st image-

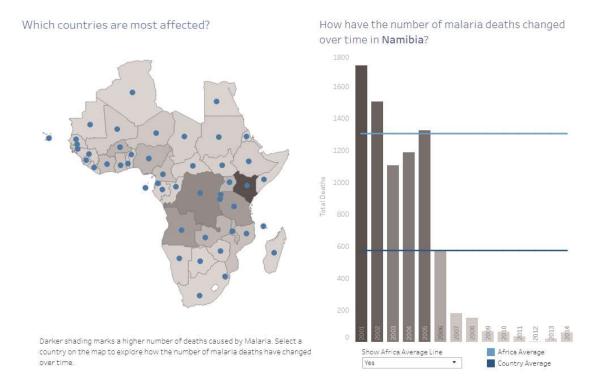

We can conclude that: -Deaths per year due to malaria in Kenya have been taken down to lowest starting since 2011. From that dashboard, I clicked on Kenya on the map, this showed deaths due to malaria for each year from 2000 to 2014. Before 2004, there were about 48000-50000+ deaths per year. In 2004 it reduced to half but again rose. After 2004, starting in 2005, till 2010 deaths were reduced from about 44000-45000 per year to 25000. And starting 2011, it dropped to its lowest 900-1000 and started to decrease.

2.) From the following 2nd image

We can conclude that: - Deaths per year due to malaria in Sudan have been decreased by 75% from 2000 starting since 2005. From that dashboard, I clicked on Sudan on the map, this showed deaths due to malaria for each year from 2000 to 2005 was between 2000-2500. And after 2005, there were about 1000-1200 deaths per year. And after 2010, starting in 2011, deaths were reduced to about 500-800 per year.

3.) From the following 3rd image

We can conclude that: - Deaths per year due to malaria in Namibia decreased by about 70% with about 1700-1800 in 2000 to about 600 only in 2006 and further low with upcoming years. From that dashboard, I clicked on Namibia on the map, this showed deaths due to malaria for each year from 2000 to 2014. Before 2006, there were about 1300-1700 deaths per year. In 2006 it was about 600 only. And After 2006, starting in 2007, deaths were reduced to about 200 per year with the lowest in about 2012.
